

## **THE USE OF INTERNET AND DIGITAL TECHNOLOGIES TO MOTIVATE LEARNERS**

The technology is more advanced each day. In these days we can take lessons in almost anywhere also in our houses thanks to the internet. There is no need to use physical books because we can have all we need in a small laptop or in a smartphone. Technically we have an entirely degree in the palm of our hands and we have access to any information at any time of the day but all of this can be against us if we don't know how to filter this information well.

There are a lot of technologies that help people of all ages to learn quickly specially if these technologies interact with us in an interactive way like the painting table for kids. With this toy the children can learn how associate shapes with colors or also begin to learn English vocabulary and pronunciation faster than with a more traditional ways like the typical school homework.

And we can't forget to talk about the top of technologies today, the AI. Maybe can be controversial because there is there have been many bad comments about this technology because it has been used to make a lot of disinformation with fake news or deep fakes.

In conclusion the technologies make our life easier but it can be a little dangerous if we don't how to use it correctly.
